

Quickfridge Rapid Install Guide

1

Aim the round air outlet down the length of the room to be kept cool.

Make sure I'm at least 1m away from a wall or any object that may stop me breathing.

2

Connect one water hose to my INLET and the other end to a suitable mains cold water supply with the tap turned off (Use the Universal Connection Pack if required).

3

Connect the other hose to my OUTLET and place the opposite end into a suitable drain point, maybe a sink. Make sure the hose cannot move, I don't want to flood your floor.

4

Using the mains cable supplied, plug me into a mains socket, keep the electrics switched OFF.

5

Open the water tap and turn my electrics on at the mains.

6

If you are using a Quickfridge Cellar unit the settings are already done for you, move on to step 8.

7

To set up water flow & temperature setting refer to setup guide.

8

I'm now working perfectly, so you can leave me alone to keep your room cool.
